The NRC is issuing for public comment a DG in the NRC's "Regulatory Guide" series. This series was developed to describe and make available to the public information regarding methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific issues or postulated events, and data that the staff needs in its review of applications for permits and licenses. The DG, entitled, "Dedication of Commercial-Grade Items for Use in Nuclear Power Plants," is a

proposed new guide temporarily identified by its task number, DG-1292. It proposes new guidance that describes acceptance methods that the NRC staff considers acceptable in meeting regulatory requirements for dedication of commercial-grade items used in nuclear power plants.

III. Backfitting and Issue Finality

DG-1292 describes a method that the staff of the NRC considers acceptable for dedication of commercial-grade items for use in nuclear power plants. Issuance of this DG, if finalized, would not constitute backfitting as defined in 10 CFR 50.109 (the Backfit Rule) and would not otherwise be inconsistent with the issue finality provisions in 10 CFR part 52. As discussed in the “Implementation” section of this DG, the NRC has no current intention to impose this DG, if finalized, on holders of current operating licenses or combined licenses.

Dated at Rockville, Maryland, this 29th day of June, 2016.
